WT_SCRN	<u>SCREENING INTERVIEW WEIGHT</u> All analyses of the cases included in this data file should use this weight variable. The weight was developed to help insure that the data is representative of the entire U.S. population (excluding Alaska and Hawaii). The weights correct for differences in selection probabilities and differential non-response rates. The March 2005 Current Population Survey conducted by the U.S. Bureau was used to post-stratify the data based on sex, age, household income, and race. The weights have been centered so that the sum fo the weights is equal to the actual sample size. Any analysis of a subset of the data should re-center the weights so that the mean weight remains equal to 1.0. For further information, see PSED2 Weights Documentation.
